RE: Education Specifications

The Education Specifications are required to be approved by the Board of Education as a part of the state grant submission. This document contains a description of rationale for the project, long range plan, educational approach and mission, enrollment projections and the details of proposed building project. The document also describes the type of spaces, intended use, general requirements of each room, specific details of the construction, furniture, and technology necessary to achieve the end result.

The Education Specifications are a tool to be utilized by the design professional commissioned to direct them throughout the design process. This draft is intended to solicit general feedback for incorporation prior to requesting Board of Education approval on April 3, 2019.
